DETAILED ACTION

Allowable Subject Matter

1. Claims 1-20 are allowed.
2. The following is an examiner's statement of reasons for allowance: claims 1-20 of application 10/645019 to Nielsen are allowable based on the extensive search done by the US Patent Office. The examiner found several examples of prior art describing similar invention, however none of them contained enough motivation to be combined together. The key feature in the applicant's case is the fact that the user drinks the beverage, which has already been mixed in with the dry ice contained in the lower compartment of the vessel. US Patents 5,749,500 and 4,782,670 to Kraus et al. and Long et al., respectively, describe vessels containing a baffle, which separates the cooling compartment from the drinking compartment, however, there is also an additional layer, which prevents the mixing of the coolant and the beverage. From the physical aspect, US Patents 3,910,461 and 4,170,320 to Eagar disclose beverage containers that feature direct contact between the cooling compartment and the beverage, however their cooling compartments are located in the middle of the container preventing the user from drinking the cooled beverage directly.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
